Dental Care Kit

Getting started and everyday care

Before you begin

Match the attachments to the pictures in the leaflet for your model. Check the device label and charging instructions before connecting the USB cable. Keep the charging connector dry.

Electric toothbrush

Brush gently with fluoride toothpaste for two minutes, twice a day. Guide the brush along the outer, inner and chewing surfaces of each tooth. Rinse the brush head after use and leave it upright to air-dry.

Water flosser

Use the model leaflet to fit the correct tip, fill the reservoir and select the starting pressure. Lean over the sink before switching it on. Switch it off before removing the tip from your mouth.

Clear tray

Check the instructions supplied with the tray before using it. For whitening, confirm which gel is compatible and follow its directions for the amount and wear time. If those details are missing, leave the tray unused until you have them.
